PROFESSIONAL SUMMARY

Information Technology undergraduate with hands-on experience designing and shipping real-world AI automation systems and full-stack web applications. Skilled in Python, GitHub Actions, and AI model integration, with a track record of independently building, debugging, and deploying end-to-end production pipelines. Seeking internship, freelance, and entry-level software development opportunities to apply strong automation and full-stack engineering skills.

TECHNICAL SKILLS

- Programming Languages:** Python, Java, C, SQL
- Web & Full-Stack Development:** HTML, Full-Stack Web Development, API Integration
- Databases & Backend:** Supabase, MySQL, Row-Level Security (RLS), Authentication
- AI & Automation:** Prompt Engineering, AI Model Integration, Automation Systems, GitHub Actions

PROJECTS

AI YouTube Automation System — Python, GitHub Actions, AI APIs

- Engineered an end-to-end automated content generation and multi-channel publishing pipeline, eliminating manual video production work.
- Integrated AI models for script generation and text-to-speech, enabling consistent scheduled publishing across multiple YouTube channels.
- Implemented multi-provider fallback logic across AI APIs to maximize pipeline uptime and reliability.

Tamil Text-to-Speech Pipeline — Python, Open-Source AI Models, Automation

- Built an AI-powered Tamil text-to-speech pipeline using open-source models to generate natural-sounding regional language audio.
- Automated the full audio generation and processing workflow, reducing manual content-creation effort.
- Resolved Tamil font-rendering issues to ensure accurate text overlay in generated video output.

Full-Stack Website Projects — Supabase, HTML, Authentication, RLS

- Developed and deployed secure, scalable full-stack web applications using Supabase for authentication and data management.
- Configured Row-Level Security (RLS) policies to enforce fine-grained data access control and protect user information.
- Designed responsive, user-friendly interfaces following modern web development best practices.

Automation Scripts — Python, APIs, GitHub Actions

- Built multiple Python automation scripts for task scheduling, API handling, and media processing.
- Streamlined repetitive workflows by integrating GitHub Actions for scheduled execution and automated status reporting.
- Improved system reliability by adding structured error handling and logging across automation pipelines.

EDUCATION

B.Tech in Information Technology

2024 — 2028

Sree Sakthi Engineering College, Coimbatore, Tamil Nadu

ACHIEVEMENTS

- Engineered and deployed real-world AI automation systems used for live multi-channel content publishing.
- Demonstrated strong hands-on experience across full-stack development and workflow automation.
- Built and shipped multiple independent projects, reflecting consistent execution and practical problem-solving ability.
